RP C18 column with a feature of a silanol group

Sunrise C18-SAC

Silanol Activity Controlled C18 Column

Comparison of separation for ethylbenzene and xylene

1 = Ethylbenzene
2 = o-Xylene
3 = m-Xylene
4 = p-Xylene

Sunrise Triacontyl (C30)

Sunrise Octacosyl (C28)

Sunrise Octadecyl-SAC (C18-SAC) has an interaction of silanol groups

Sunrise C30, C28

Sunrise C18-SAC

Name	Stationary phase	Carbon content	Ligand density	Particle size
C30 Triacontyl		18%	1.7 $\mu\text{mol}/\text{m}^2$	3 μm , 5 μm
C28 Octacosyl		18%	1.7 $\mu\text{mol}/\text{m}^2$	3 μm , 5 μm
C18-SAC Octadecyl		14%	2.1 $\mu\text{mol}/\text{m}^2$	3 μm , 5 μm

pH range of C30 and C28: pH2~pH8, C18-SAC: pH2~pH7.5

Silica support
 Surface area : 340 m^2/g
 Pore volume : 1.0 mL/g
 Pore diameter : 12 nm

End-capping
 Trimethylsilyl group (TMS)

◆ Characteristics of end-capping type Sunrise series

C30, C28: (C30 and C28 shows the same separation.)

■ A long alkyl chain improves both separation of fat-soluble compounds to compare with C18 phase and an excellent reproducibility in retention under high aqueous conditions.

■ Furthermore, a suitable ligand density of C28 allows to be obtained a shape peak shape even if more than 50% aqueous mobile phase is used.

■ Different selectivity

C18: (C18 has stopped production. Sunniest C18 is recommended as a replacement.)

■ Conventional C18 phase with full end-capping

PhE:

(Sunrise PhE has stopped production. Sunniest PhE is recommended as a replacement)

■ Interaction based with p-electron such as p-p interaction

■ p-electron also interacts with a polar site of a compound, so that phenyl phase improves separation of polar compounds. Ethylene chain between silica surface and phenyl group allows a movable sphere of a phenyl group to be wide. A chain with more than three carbons shows more hydrophobic interaction, so that p-electron interaction decreases relatively.

■ Phenethyl (PhE) group is a suitable phenyl phase.

■ Separation of Basic compounds

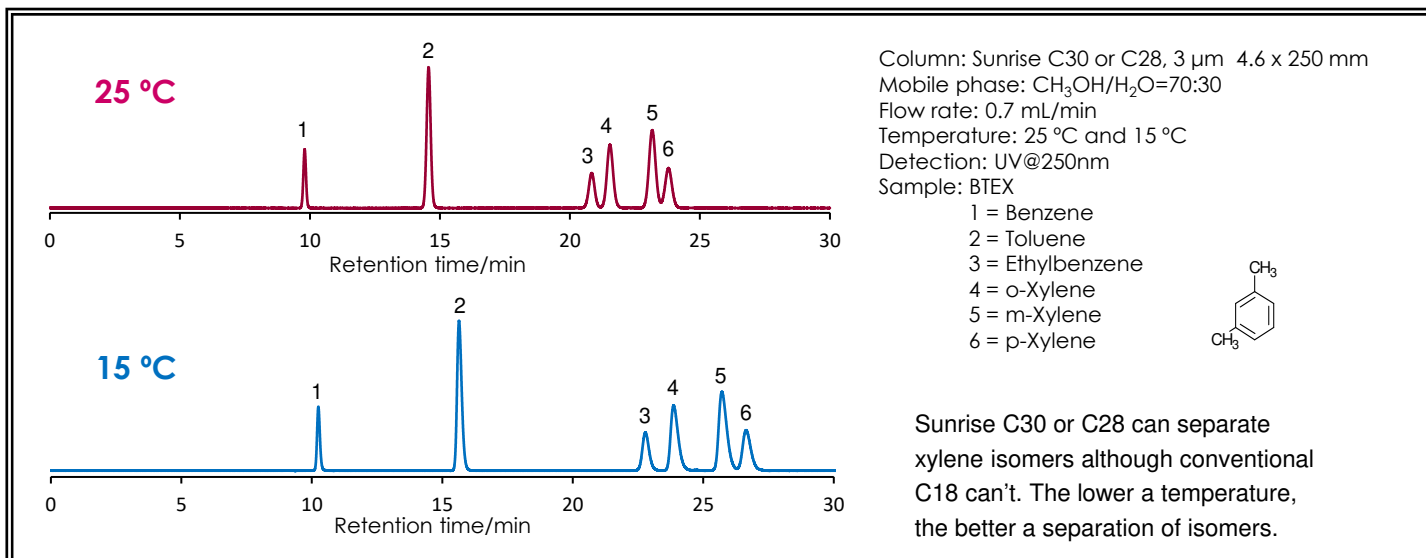

■ Separation of Vitamin E Isomer can be separated by C28

Sunrise C30, C28

■ Separation of xylene isomers

■ Separation of vitamin K1 isomers

■ Separation of ter-phenyl isomers

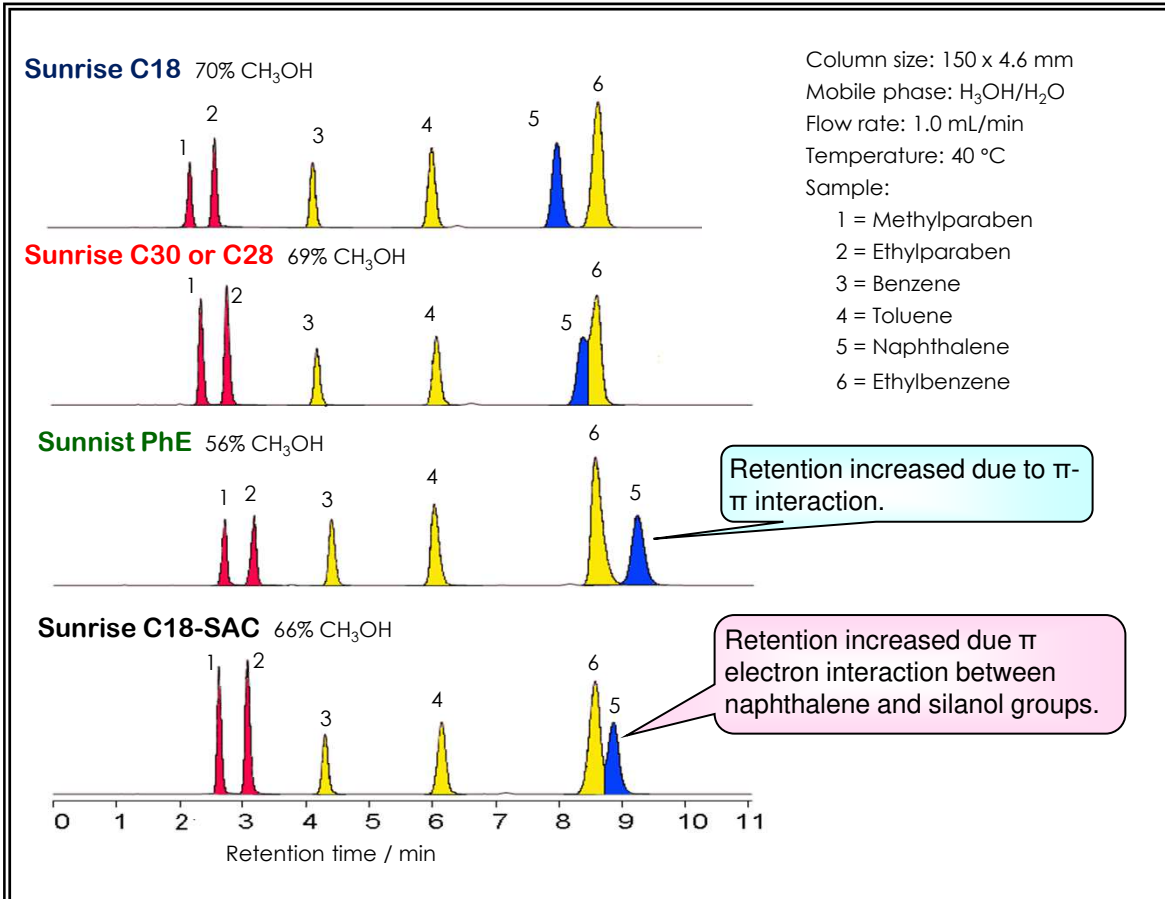

Sunrise C28

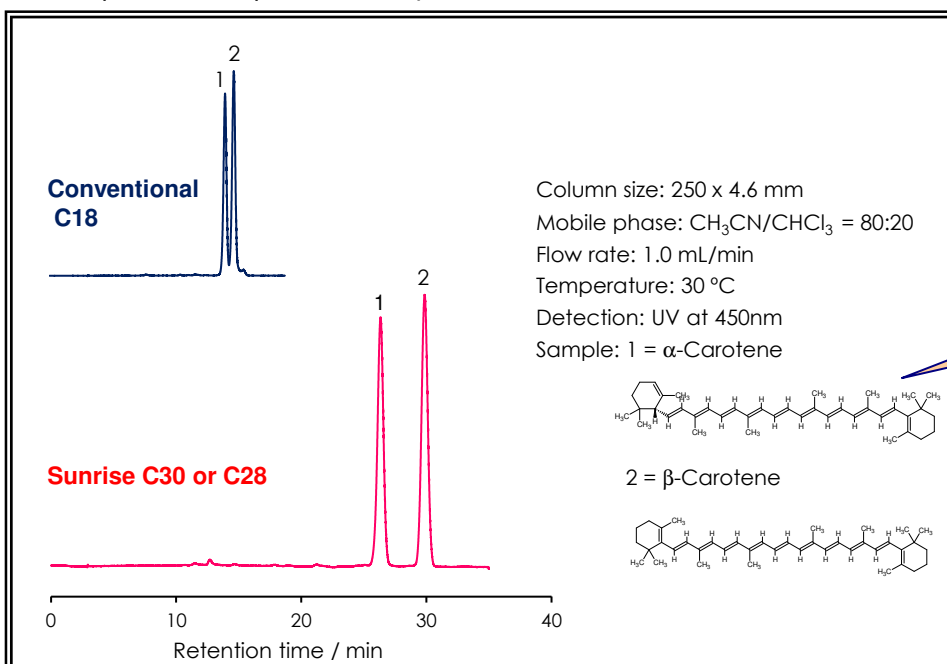

Sunrise C18-SAC

Comparison of stationary phases

Comparison of separation of α, β - carotene

The mobile phase including chloroform makes alkyl chains brush up because chloroform can enter among alkyl chains. Consequently retention times of C30 or C28 became 2 times longer than C18.

Sunrise C18-SAC

Silanol Activity Controlled C18 HPLC Column

◆ New generation reversed-phase utilized silanol groups

■ Silanol group and peak tailing

It is generally said that residual silanol groups on a stationary phase such as C18 (ODS) causes absorption or peak tailing for a sample. Especially silanol groups near a hydrophobic site don't solvate with water completely, so that they show high absorption for basic compounds. Its peak shows terribly tailing. Several end-capping techniques have been developed to solve these problems for many years.

■ Silanol activity control technology

ChromaNik developed the technique that decreased only silanol groups with high absorption activity to a basic compound and remained effective silanol groups on the stationary phase. Silanol activity control and no end-capping led the existence of silanol groups with high hydration which created a new and unique reversed-phase separation mode including hydrogen bond and ion-exchange interaction. Furthermore, silanol activity controlling, then end-capping technique improved a peak shape of a basic compound exceedingly.

◆ Feature of Sunrise series

Sunrise C18

- The "1st Choice" column as a fully end-capped C18 column
- Full end-capping after silanol activity control
- Reducing adsorption of a basic compound extremely
- A good peak shape for a metal chelating compound
- Widely available for general reversed-phase separation

Sunrise C18-SAC

- The "2nd Choice" column which takes advantage of effective silanol groups interaction
- Reducing silanol groups with high adsorption activity
- The new separation mechanism including hydrogen bond and ion-exchange interaction
- Effective for separation of a basic compound and a polar compound
- Different selectivity and improvement of separation without changing a mobile phase

■ The elution order of pyridine

Sunrise C18-SAC

Silanol Activity Controlled C18 HPLC Column

◆ Sunrise series create an unique separation

* Effectiveness of silanol activity control: Comparison between Sunrise C18 and C18-SAC

Sunrise C18 is the so-called fully end-capped C18 column. It shows the same separation behavior as a conventional C18 column.

On the other hand, Sunrise C18-SAC shows hydrogen bond and ion-exchange interactions based on a residual silanol on the silica support in addition to reversed-phase separation. For example Sunrise C18 column separates a basic compound similarly as a conventional C18, while

Sunrise C18-SAC makes retention of a basic compound be large because an ion-exchange interaction works although a non-ionic compound shows the almost same retention on both Sunrise C18 and C18-SAC. Furthermore, Sunrise C18-SAC shows large retention for a polar compound such as caffeine.

■ Comparison of selectivity for basic compounds

■ Comparison of peak shape and retention

■ Comparison of caffeine

Sunrise C18-SAC

Silanol Activity Controlled C18 HPLC Column

◆ Multiple mode separation is achieved on Sunrise series

* Silanol groups controlled its activity functions as ion-exchange groups

Sunrise C18-SAC is bonded with octadecylsilane on a pure silica gel and controlled its silanol activity without end-capping. Its carbon content is 14%.

Separation on Sunrise C18-SAC is done including hydrogen bond and ion-exchange interaction based on silanol groups except for hydrophobic interaction. Control of pH and salt concentration of a mobile phase can regulate retention.

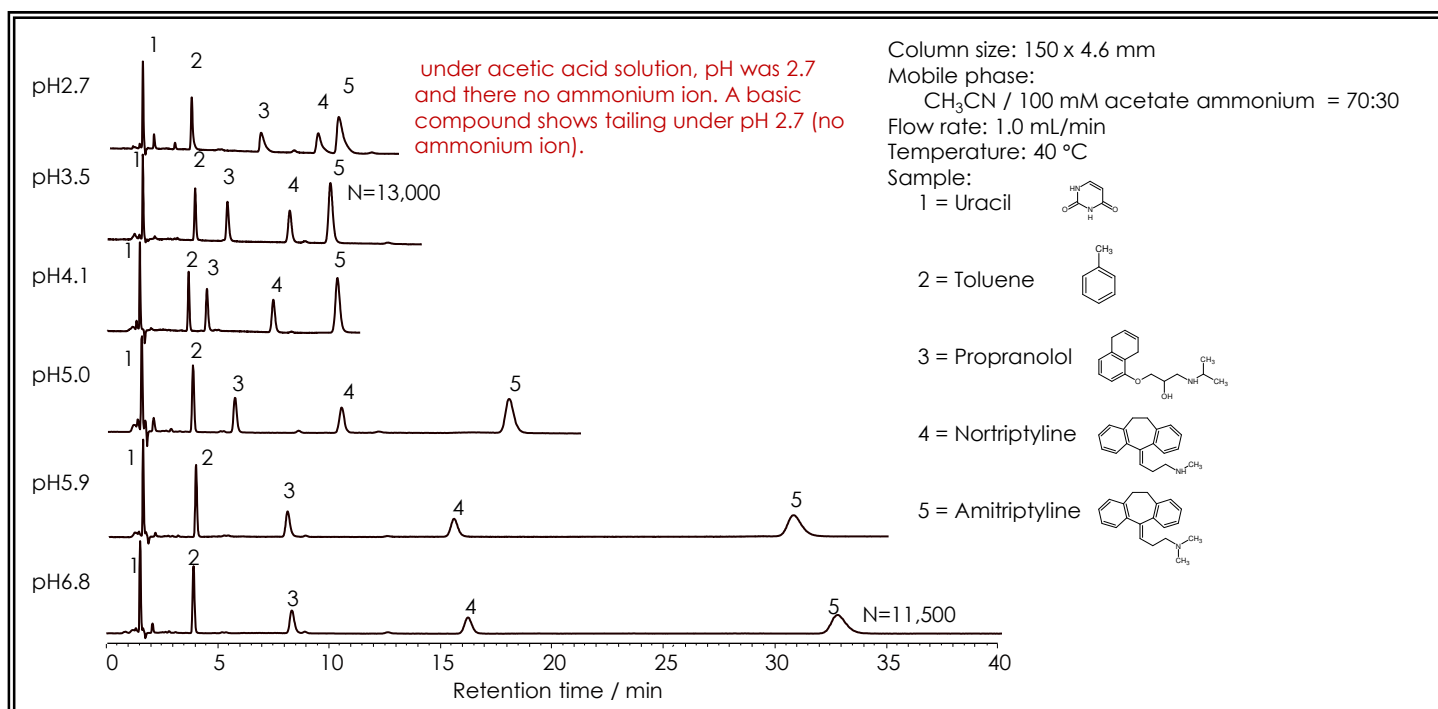

■ Separation of basic compounds with ammonium acetate: Effect of salt concentration (Sunrise C18-SAC)

■ Relationship between buffer concentration and retention (Sunrise C18-SAC)

■ Chromatograms under different pH conditions (Sunrise C18-SAC)
